The Perfusion Improvement Reporting System

### **PIRS-II Survey**

In late August we surveyed 200 subscribers to PIRS-2

The survey setout to get feedback on who is likely to report good catch near-miss and no harm incidents and the value of reports to individual and unit practice. We explored barriers to reporting and what would facilitate reporting with a view to understanding constraints and working to overcome these.

The response rate of 50% was as good as we expected and provided insight into attitudes of perfusionists to the system. We are working to make changes to the format to address concerns such as anonymity and discovery as well as better explain how PIRS-2 works. We will provide more detail in the coming months.

PIRS-II—PIRS-2 Survey P.1-6

### **PIRS-2 SURVEY RESULT**

he su Th

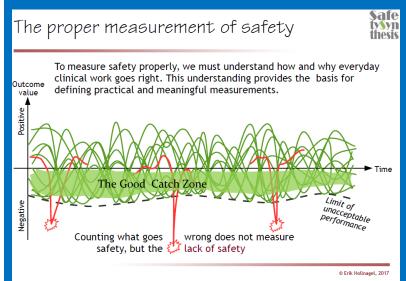

he PIRS-2 survey was conducted for 2 weeks in August 2019 using Survey Monkey. The survey was emailed to 198 recipients of the PIRS-2 reports on the PIRSList email group. The response rate was 50%.

#### **SUMMARY**

22% of respondents had submitted a report in the last 12 months although the reports were read by virtually all respondents with a high percentage rating these as value to individual of center practice. While 80% were either very likely or likely to submit reports, barriers to reporting included concerns on anonymity or security of the system with regional differences in legal systems accounting for reluctance to report, notably from the USA.

Very interestingly unit culture was commonly cited from Australian respondents. In line with this in answer to what would facilitate reporting, respondents requested a better understanding of what and how to report along and improved access to the system. International respondents suggested that more regular and wider marketing globally of PIRS-2 with invitations to partici-

pate would encourage reporting beyond Australia and New Zealand.

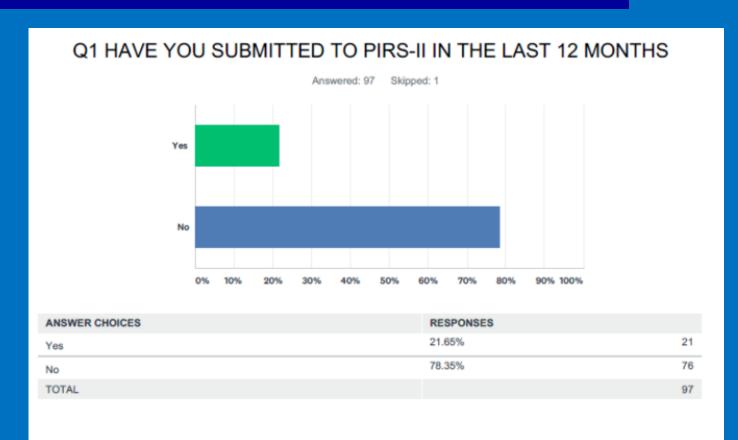

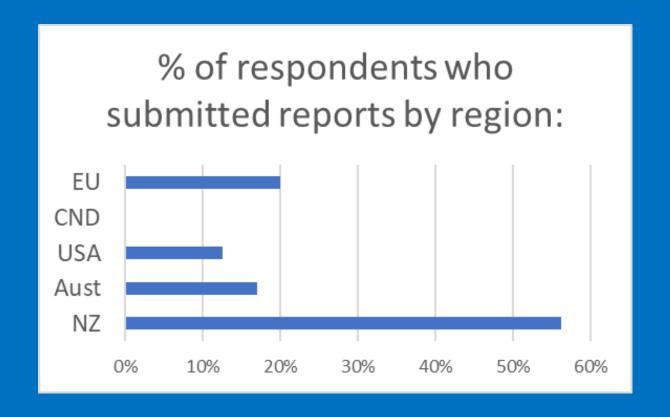

There were some misconceptions that became apparent indicating we can better inform perfusionist about the concepts of reporting—this isn't something that is delegated.

PIRS is very grateful for the feedback. We have plenty to work on but KEEP REPORTING

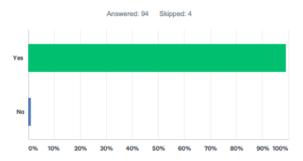

The overall results appear below

Understanding and sharing what went well adds resilience to one's practice and to the health care system. Adding resilience is an improvement process.

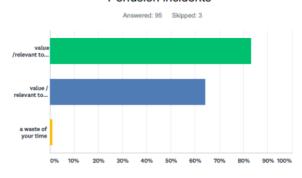

## Q2 HAVE YOU READ PIRS-II REPORTS EMAILED TO YOU IN THE LAST 12 MONTHS

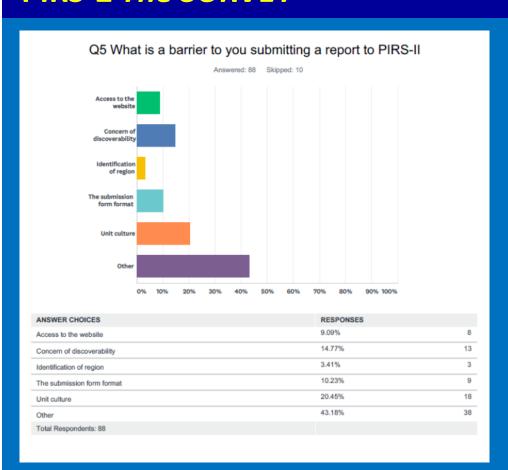

ANSWER CHOICES	RESPONSES	
Yes	98.94%	93
No	1.06%	1
TOTAL		94

#### Q3 Do you consider receiving reports of Good catch Near-miss/no harm Perfusion incidents

ANSWER CHOICES	RESPONSES	
value /relevant to your own practice	83.16%	79
value / relevant to your team	64.21%	61
a waste of your time	1.05%	1
Total Respondents: 95
